How the PURESWIM® Media Filter works

Pool water is routed through the sand filled pressure vessel. The sand traps particles so small they are undetectable to the naked eye. Over time, dirt accumulates in the spaces between the sand particles, causing the pressure in the vessel to rise.

This signals you to "backwash" the filter. Simply reverse the water flow and "knock out" the dirt.

6 FUNCTION MULTIPORT VALVE

- Filter
- Backwash
- Rinse
- Waste
- Closed
- Re-circulate

STAINLESS STEEL CLAMP

For corrosion resistance and allows 360 degree rotation of multi-port valve.
